CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 150 pages. Dimensions: 8.0in. x 5.0in. x 0.3in. The most complete, comprehensive, and easy-to-use disc golf flight chart available! The inFlight Guide is the only disc flight resource that you'll ever need. The inFlight Guide is the Rosetta Stone of flight charts. Disc flight data contained in the guide comes from a total of 19 different flight charts and rating systems with as many as six different sources being applied to any one disc. Using multiple data sources has a smoothing effect on a disc flight path and eliminates outlier values caused by unnecessary bias, flight testing extremes, and minor rating errors, creating the most reliable flight data available as the Relative Stability Scale. The easy to understand inFlight disc flight numbers are universal and can be applied to all manufacturers, instead of relying on a separate scale for each company. How the inFlight Guide is Different The inFlight Guide uses the Relative Stability Scale to model the flight path of each disc. Unlike other flight charts that utilize an arbitrary numbering system to describe different aspects of a disc's flight, the Relative Stability Scale shows flight characteristics relative to the expected minimum and maximum range of values and are displayed as a . While certain things, such as glide, are important, the Relative Stability Scale simplifies the flight values and summarizes each disc based only on the following: High-Speed Turn High-Speed Turn occurs during the first part of flight when the disc is traveling the fastest, with the most spin, and is the amount to which a disc will turn to the right. The lower the (especially negative), the greater the likelihood the disc will bank right (and/or turn over) during the initial portion...
